OVERVIEW

August 10, 11 and 12, 2017

Workshop Location:

AREF (James Andrews, MD Research & Education Foundation)

1020 Gulf Breeze Parkway, Gulf Breeze, FL 32561

Why Choose an AAOM Workshop?

AAOM was the first organization in the world to offer regenerative orthopedic medicine education. AAOM was established in 1983 as a not for profit Educational Organization for Physicians. For the past 35 years, the AAOM has trained and educated thousands of doctors around the world about safe, effective and accurate techniques for your Interventional Regenerative Orthopaedic Medicine practice and all without commercial bias. Great skills, great protocols, great techniques, great diagnostics make all products more effective. The AAOM are the physician leaders and teachers in Interventional Regenerative Orthopaedic Medicine for orthopedic injuries in terms of teaching, research presentations, and education.

Why Choose this AAOM Workshop?

The AAOM Annual Workshop is a comprehensive, one of a kind course now offered as an “a la carte” experience. Our objectives in providing this educational workshop are to make sure you are gaining the training and skills to be an effective Interventional Regenerative Orthopaedic Medicine physician. Rather than offer a 24 hour program, of which only 4 or 8 or 16 hours apply to you, we have packaged this extraordinary workshop content so that you can choose how much works for you. You can choose one day, two days, or all three. There is no other IROM Workshop offered anywhere in the world that teaches you IROM, at your desired level, at your desired pace, focusing on the techniques you choose for your practice, and all taught by world-class faculty. The AAOM 2017 Annual Workshop, August 10, 11, 12, 2017 in Gulf Breeze, FL is customized IROM training for you.

Curriculum Fulfillment for Specialist in (IROM) IROM 200: AAOM Annual Cadaver Workshop

- a. A Beginner/Intermediate level course with pre-requisites of IROM 101
- b. Held in August annually
- c. This educational session focused on the learner obtaining the appropriate physical exam skills, palpation, guidance, marking, and safety and injection skills necessary to gain entrance into an international course.
- d. It is a mixture of didactic lectures, small group hands – on sessions, round tables, and cadaver lab stations (utilizing both intermittent fluoroscopy and ultrasound).
